

# DAY 13 - Hands-On with Firewalls

## Quick Notes

- **Firewall** = Traffic filter for your system/network
  - Two types you'll explore:
    - **Windows Defender Firewall**
    - **UFW (Linux)**
- 

## Practical Tasks

### Windows Defender Firewall

**Goal:** Block internet access for an application

- Open `Control Panel > Windows Defender Firewall`
- Go to **Advanced Settings > Outbound Rules**
- Create a **New Rule:**
  - Type: **Program**
  - Path: Choose any installed app (e.g., Chrome)
  - Action: **Block**
  - Name it and Finish
- Try launching the app — it should fail to access the internet.
- Delete the rule after testing
